## Constructing Two-Way Tables

| (a) |
| :--- |
| A teacher asked two of her classes, |
| 7A and 7B whether they were left |
| or right handed. |
| In 7A, there were a total of 32 <br> students and 11 of them were left- <br> handed. |

In 7B there were 19 right-handed students.

Across both classes, there was a total of 23 left-handed students.
(a) Complete a two-way table to show this information.

|  | Left | Right | Total |
| :---: | :---: | :---: | :---: |
| $7 A$ | 11 | 21 | 32 |
| $7 B$ | 12 | 19 | 31 |
| Total | 23 | 40 | 63 |

(b) A student is chosen at random. Find the probability that they are left-handed. $\frac{23}{63}$
(c) A right-handed student is chosen at random. Find the probability that they are in 7A. $\frac{21}{40}$

## (b)

A librarian surveyed 100 people of different ages to find out their preferred type of fiction - crime, romance or fantasy.
Of the 36 under 40 s who answered the survey, 11 preferred crime fiction.
A total of 28 people preferred romance novels.
Of the people who were aged 40 or over, 9 preferred romance and 22 preferred fantasy fiction.
(a) Complete a two-way table to show this information.

|  | Crime | Romance | Fantasy | Total |
| :---: | :---: | :---: | :---: | :---: |
| Under <br> 40 s | 11 | 19 | 6 | 36 |
| 40 or <br> over | 33 | 9 | 22 | 64 |
| Total | 44 | 28 | 28 | 100 |

(b) A person is chosen at random. Find the probability that they are under 40 and prefer either romance or fantasy fiction. $\frac{25}{100}$
(c) A person who prefers crime fiction is chosen at random. Find the probability that they are aged 40 or over. $\frac{33}{44}$
(c)

A teacher recorded the mock exam grades received for A-level Mathematics by students in each of her two classes.

There were two more students in class $Y$ than in class X.
Class $X$ contained 28 students and received 11 B grades.
Students in class Y receives twice as many A grades as those in class X .
The total number of students who got grade C was 15 , and 7 of these students were in class $Y$.
(a) Complete a two-way table to show this information.

|  | Grade A | Grade B | Grade C | Total |
| :---: | :---: | :---: | :---: | :---: |
| Class X | 9 | 11 | 8 | 28 |
| Class Y | 18 | 5 | 7 | 30 |
| Total | 27 | 16 | 15 | 58 |

(b) A member of class X is chosen at random. Find the probability that they received a grade B or a grade C. $\frac{19}{28}$
(c) All students that obtained a grade C will be required to re-sit their exam. If a student is chosen at random, what is the probability that they will not have to resit their exam? $\frac{43}{58}$
